

ASV ACCUMULATOR SAFETY VALVE

DMIC Accumulator Safety Valves are designed with all the standard features required to properly Isolate, drain and relieve hydraulic pressure stored in hydraulic accumulators. The assembly consists of a main isolation ball valve with handle for manual operation. The valve block includes industry standard size CO8-2 cartridge valve cavities for drain valve, relief valve and optional solenoid drain valve. If Solenoid is not being used, a CO8-2 Cavity plug is required. Available upon request. Cartridge valves are not included and alternate cavity ports are available upon request.

- Standard designs for carbon steel rated up to 6000 psi. Stainless steel and aluminum valve bodies are also available as options.
- A wide array of connection types are available limiting the need for additional accumulator and pressure side adapter fittings. DMIC can also offer ASV valves with SAE J518 flange connections, consult factory for valve dimensions and availability.
- Manifold mounted options are available as special order. This includes multiple valve header manifolds and assemblies.
- Standard valves include drain port and gauge ports, SAE-4 O-Ring Boss. Other sizes available upon request.
- Temperature Range: -60°F to 400°F (Depending on Material Combinations)
- An extensive variety of additional accessories are available as with all DMIC valves including handle type, locks, limit switches etc. See DMIC Ball Valve Catalog for options.
