

PCH NETWORK PORTAL

Triad is excited to announce a new product offering from Parker Pneumatics Technology: the PCH Network Portal. The PCH Network Portal was engineered for flexible manufacturing applications where machine changes are common, PLC's are not always accessible, and where obstacles on the plant floor make setup, configuration and troubleshooting time consuming. The PCH Network Portal is engineered with configurable I/O with true PNP/NPN circuitry switching and the open protocol, IO-Link, on each port for easy machine design changes.

"It's like having a built in technician and the best part is no additional software is necessary"

Reach out today to learn more about adding the flexibility of this product to your operation.
